Summary

I am a well-grounded and solution-oriented Computer Scientist with a wide variety of entry-level skills developed through internships with pre-eminent computer technology firms. Adept at motivating self and others. Passionate about software development, Data Science and Analysis.

Experience

Director of Technology

Regaleon Ltd

Oct 2020 – Date

- My team and I developed MyRadar app, an emergency and security alert app for users in Nigeria. It shows the security alerts raised by different users in the location the user currently is, user can also search for location. A panic button functionality was also integrated into the app for when a user is in danger, the users location will be sent to his/her emergency contacts.
- My team and I organized the development of Lagos state Government Wives associations website for a program of 10000 women, collected data about everyone and also about several aspects of the program. My team and I also worked on different social media strategies to broadcast the event and I developed a dashboard using Power BI to illustrate important insights that was presented to the state government.
- Captured and put together a virtual tour of the full campus of Lagos State university.
- Created an online poll to gather data on Monster Energy Drink in Nigeria, from the data gathered, we created a targeted online advert for Monster Energy drink.
- Developed a Regression model for a Real Estate Firm in Nigeria to predict the different price of house in Lagos Nigeria.

Data Analyst

Lagos State Government

Oct 2019 - Dec 2019 (3 months)

- Recorded and presented the data of over 2000 patients that were present for the project. The data was presented using several data visualization tools that aided the medical practitioners in choosing the 150 patients that had the free surgery.
- Through the feedback note given to patients I was able to present to the hospital different issues that needed immediate attention, while my supervisor used the same data collected to present to the state government.
- Predict future patient visitation to the hospital.
- Constant feedbacks from the 150 patients that went through surgery were taken and reports were written and submitted to both the medical practitioners in the Hospital and to the state government throughout the project duration.

Sales Officer

Technology Advantage Network Ltd

Jun 2018 - Sep 2019 (1 year 4 months)
